Description

Aeroflow's Throttle bodies are a true billet construction

The 1375CFM throttle bodies utilise dual pattern flange (4150 & 4500) and incorporate the idle air control valve (IAC) and throttle position sensor (TPS)

The 175 bore is designed with a special radius which promotes maximum air flow and minimum turbulence

Will Fit on both 4150 / 4500 FLANGE Intake Manifolds
