Description

TRE210-516-RANGE

These one-piece, precision formed pushrods are constructed from SAE 4130 chrome-moly tubing, centerless round to exacting tolerances, and case hardened to Rc 60, making them guide-plate compatible. They are then laser etched with a length and a part number. The 210° radius makes them suitable for extreme high lift camshafts.

Available from 6.000" > 9.100" Long
